ABSTRACT

This listing is a supplement to "A Study of Student Mobility in Texas Public Schools" (Texas Education Agency), a study that examined the magnitude of student mobility in Texas public schools by reporting how many students were moving, when and where they moved, and which students moved. The study clarified the relationships between mobility and academic performance at the individual student, campus, and district levels. This listing provides detailed information on student mobility rates by county, district, and campus. Data are from 1994-1995 Texas Public Education Information Management System. The calculation method and some cautions in interpreting data for small schools are included. (SLD)

A Study of Student Mobility in Texas Public Schools: Supplementary Data Report

Introduction

This listing is a supplement to *A Study of Student Mobility in Texas Public Schools* (Texas Education Agency, 1997, Publication No. RE7 601 03; $5.00/copy). The study examined the magnitude of student mobility in Texas public schools by reporting how many students are moving, when and where they are moving, and who is moving; and clarified the relationships between mobility and academic performance at the individual student, campus, and district levels. The listing provides detailed information on student mobility rates by county, district, and campus.

Definitions of Key Terms

In the current Texas Public Education Information Management System (PEIMS), student attendance is recorded every six weeks for six times during a school year. *Cumulative enrollment* is the count of all students reported in attendance during any 6-week reporting period. If students enroll on several campuses during a school year, they are only counted once at each of those campuses.

If a student changes schools between any two 6-week reporting periods, by definition that student has made one intercampus move. An intercampus move is counted as an *outmigration* with respect to the departing school and an *inmigration* to the receiving school. An actual intercampus move between two Texas public schools may either take place within a district (*intradistrict*) or between districts (*interdistrict*). Any student who starts attending a Texas public school after the first 6-week period, or who has missed the previous 6-week period, also is counted as *inmigration* to the particular school. In the study, these special cases are called *new entrants*. Similarly, any student who can no longer be located in PEIMS as attending a Texas public school before the last 6-week period is counted as an *outmigration* to the particular school, and these special cases are called *withdrawals*.

Inmigration rate in this listing is the ratio of the number of moves *into* a campus during the 1994-95 school year, to the cumulative enrollment of that campus during the same school year.

Outmigration rate is the ratio of the number of moves *from* a campus during the 1994-95 school year, to the cumulative enrollment of that campus during the same school year.

Turnover rate is the ratio of the number of move-ins and move-outs in a campus during the 1994-95 school year, to the cumulative enrollment of that campus during the same school year.

Data Source

The data used to prepare this document are from the summer collection of the 1994-95 student attendance PEIMS data submission.

Calculations

Numerators:

1. *Total number of move-ins (inmigration) = the number of moves to this campus from the same district + the number of moves to this campus from different districts + the number of moves to this campus from outside the Texas public school system (new entrants or reentrants)*

2. *Total number of move-outs (outmigration) = the number of moves from this campus to other campuses in the same district + the number of moves from this campus to other campuses in different districts + the number of withdrawals from the system (can no longer be found in PEIMS)*

3. *Turnover (gross migration) = total number of move-ins + total number of move-outs*

Numerators for districts and counties are aggregated from campus-level numbers.

Denominators:

In all cases, the denominator used to calculate inmigration, outmigration and turnover rates is cumulative enrollment during the 1994/95 school year. Students are unique to each campus, district and county—that is, each student is only counted once at the campus, district, and county.

Mobility Rates:

1. *Student Inmigration Rate* = $\frac{\text{Number of Move - ins}}{\text{Cumulative Enrollment}}$

2. *Student Outmigration Rate* = $\frac{\text{Number of Move - outs}}{\text{Cumulative Enrollment}}$

3. *Student Turnover Rate* = $\frac{\text{Turnover}}{\text{Cumulative Enrollment}}$

Interpretive Issues

Caution is advised when interpreting the rates for small schools or districts. Those with low cumulative enrollments may have inflated mobility rates because of the way in which the rates are computed. Turnover rates can be higher than 100% in the case of campuses where total movement into and out of the school exceeded enrollment, i.e., in the case of alternative campuses where many of the same students may have entered and departed more than once during the year. Thus, a turnover rate of 30% for a campus does not necessarily mean that 70% of the students on that campus are stable.

Since both district and county turnover are aggregated from campus-level numbers, district or county turnover rates are interpreted as the ratio of the number of move-ins and move-outs at the campus level, i.e., total campus turnover in a district (or county), to the cumulative enrollment of that district (or county).
